Planning

The start of the project is the planning, then research and analysis. Next the designing part comes and at last, manufacturing. The following components are going to be developed in order from first to last : Compressor, Turbine, Combustion Chamber, Nozzle

Compressor

Compressor Blade

This section will be dedicated to researching, analysing, and designing the fitting blade geometry, using the NACA configuration.

The first part would be determining the airfoil shape with NACA configuration, with the most air intake potential. Next is determining the entire geometry and if needed, doing stress analysis.

Pritchards Airfoil geometry design for turbine blade
